packages

Define package sets from nixpkgs and install them on one or more machines

System

This service is meant to be consumed by the UI / API, and exposes a JSON serializable interface to add packages to a machine over the inventory.

The example below demonstrates installing the "cbonsai" application to a machine named "server."

```
1 instances.packages = {  
2     roles.default.machines."server".settings = {  
3         packages = [ "cbonsai" ];  
4     };  
5 };
```

Roles

The packages service has the following roles:

- default

Options for the default role

packages

The packages to install on the machine

Type: `list of string`

Default:

```
[ ]
```

Example

```
[  
  "cowsay"  
]
```
