Neovim

Neovim can be themed using the Noctalia via the base16 colorscheme.

Setup

1. Enable User Templates in Noctalia:

- Open **Settings → Color Scheme → Templates → Advanced → Enable User Templates**

2. Add a user template for neovim

- Copy this into `./config/noctalia/user-templates.toml`

```
[templates.nvim-base16]
input_path = "~/config/nvim/lua/matugen-template.lua"
output_path = "~/config/nvim/lua/matugen.lua"
post_hook = 'pkill -SIGUSR1 nvim'
```

3. Install the base16 colorscheme by RRethy, using your package manager of choice. e.g. with Lazy:

```
return { 'RRethy/base16-nvim',
  config = function()
    require('matugen').setup()
  end,
}
```

4. **Add the template to your neovim configuration:** Add the following file to you neovim configuration (in `~/.config/nvim/lua/matugen-template.lua`, as above):

You are viewing the **v4 (stable)** documentation. [Switch to v5 \(alpha\) →](#)

```
local M = {}
```

You are viewing the **v4 (stable)** documentation. [Switch to v5 \(alpha\) →](#)

```
require('base16-colorscheme').setup {
  -- Background tones
  base00 = '{{colors.surface.default.hex}}', -- Default Background
  base01 = '{{colors.surface_container.default.hex}}', -- Lighter Background (status bars)
  base02 = '{{colors.surface_container_high.default.hex}}', -- Selection Background
  base03 = '{{colors.outline.default.hex}}', -- Comments, Invisibles
  -- Foreground tones
  base04 = '{{colors.on_surface_variant.default.hex}}', -- Dark Foreground (status bars)
  base05 = '{{colors.on_surface.default.hex}}', -- Default Foreground
  base06 = '{{colors.on_surface.default.hex}}', -- Light Foreground
  base07 = '{{colors.on_background.default.hex}}', -- Lightest Foreground
  -- Accent colors
  base08 = '{{colors.error.default.hex}}', -- Variables, XML Tags, Errors
  base09 = '{{colors.tertiary.default.hex}}', -- Integers, Constants
  base0A = '{{colors.secondary.default.hex}}', -- Classes, Search Background
  base0B = '{{colors.primary.default.hex}}', -- Strings, Diff Inserted
  base0C = '{{colors.tertiary_fixed_dim.default.hex}}', -- Regex, Escape Chars
  base0D = '{{colors.primary_fixed_dim.default.hex}}', -- Functions, Methods
  base0E = '{{colors.secondary_fixed_dim.default.hex}}', -- Keywords, Storage
  base0F = '{{colors.error_container.default.hex}}', -- Deprecated, Embedded Tags
}
end

-- Register a signal handler for SIGUSR1 (matugen updates)
local signal = vim.uv.new_signal()
signal:start(
  'sigusr1',
  vim.schedule_wrap(function()
    package.loaded['matugen'] = nil
    require('matugen').setup()
  end)
)

return M
```

The setup function applies the theme, while the signal handler clears the old theme module out of the lua cache, then applies the new theme, whenever nvim is signalled

You are viewing the **v4 (stable)** documentation. [Switch to v5 \(alpha\) →](#)

5. Setup base16 in your init.lua

```
require('matugen').setup()
```

When you restart neovim, it should use your noctalia theme.
