Spotify

This guide covers theming Spotify with the help of [spicetify](#) and [comfy](#)

Setup

1. **Install spicetify according to your linux distribution:** refer to this link over here:

<https://spicetify.app/docs/getting-started>

2. **Install the comfy theme MANUALLY:** refer to this link over here:

<https://github.com/Comfy-Themes/Spicetify?tab=readme-ov-file#-manual-installation>

or follow the instructions below,

redirect to your spicetify/Themes/ directory

You are viewing the **v4 (stable)** documentation. [Switch to v5 \(alpha\) →](#)

```
spicetify config-dir
```

```
# example:
```

```
cd ~/.config/spicetify/Themes/
```

```
# now clone Comfy Repo here
```

```
git clone https://github.com/Comfy-Themes/Spicetify.git ComfyRepo
```

```
# move the Comfy folder to the Themes/ directory
```

```
mv ./ComfyRepo/Comfy/ ./
```

```
# optionally clean up as well :)
```

```
rm -rf ./ComfyRepo/
```

```
# finally apply the theme
```

```
spicetify config current_theme Comfy color_scheme Comfy
```

```
spicetify config inject_css 1 replace_colors 1 overwrite_assets 1 inject_theme_js 1
```

```
spicetify apply
```

3. Enable matugen spicetify theming in Noctalia:

- Open **Settings → Color Scheme → Templates → Programs**
- Toggle on **Spicetify**

4. Enjoy!

Troubleshooting

- **Theme not applying:** Run `spicetify apply` or restart spotify
