garage

S3-compatible object store for small self-hosted geo-distributed deployments

System

[Garage](#) is an open-source, S3-compatible distributed object storage service for self-hosting.

This module provisions a single-instance S3 bucket. To customize its behavior, set `services.garage.settings` in your Nix configuration.

Example configuration:

```
1 instances = {  
2     garage = {  
3         roles.default.machines."server" = {};  
4     };  
5 };
```

Roles

The garage service has the following roles:

- default

The `default` role has no configuration

← Previous
emergency-access
