monitoring

Monitoring service for the nodes in your clan

Uncategorized

❖ Experimental

This service is experimental and will change in the future.

Usage

```
1 inventory.instances = {  
2     monitoring = {  
3         module.name = "monitoring";  
4         roles.telegraf.tags.all = {  
5             settings.interfaces = [ "wg-clan" ];  
6         };  
7     };  
8 };
```

This service will eventually set up a monitoring stack for your clan. For now, only a telegraf role is implemented, which exposes the currently deployed version of your configuration, so it can be used to check for required updates.

Roles

The monitoring service has the following roles:

- telegraf

Options for the `telegraf` role

`allowAllInterfaces`

Deprecated. Has no effect.

Type: `null or boolean`

Default:

`null`

Declared in: [clanServices/monitoring/default.nix](#)

`interfaces`

Deprecated. Has no effect.

Type: `null or (list of string)`

Default:

`null`

Declared in: [clanServices/monitoring/default.nix](#)
