Ssh

Ssh to a remote machine

Usage: `clan ssh`

Positional Arguments

1. **machine:** `<MACHINE>` Machine to ssh into (uses `clan.core.networking.targetHost` from configuration).

Options

This subcommand allows seamless ssh access to the nixos-image builders or a machine of your clan.

Examples

```
$ clan ssh berlin
```

Will ssh in to the machine called `berlin`, using the `clan.core.networking.targetHost` specified in its configuration

```
$ clan ssh --json [JSON] --host-key-check none
```

Will ssh in to the machine based on the deployment information contained in the json string. [JSON] can either be a json formatted string itself, or point towards a file containing the deployment information
